

## Exercici 1. XQuery

### 1.1.

```
for $f in doc("facturacio.xml")//factura
where $f/total >= 500 and $f/total <= 1000
return $f/client/raosocial/nom/text()
```

### 1.2.

```
count(
for $r in doc("facturacio.xml")//rebut
where $r/linies/producte/descripcio = "Porquet de xocolata negra"
return $r
)
```

### 1.3.

```
sum(
for $p in doc("facturacio.xml")//producte
where $p/descripcio = "Porquet de xocolata amb llet"
return $p/quantitat * $p/preuunitari
)
```

### 1.4.

```
for $r in doc("facturacio.xml")//rebut
let $total := sum($r/linies/producte/quantitat)
where $total = 2 or $total = 50
return data($r/@numero)
```

### 1.5.

```
for $f in doc("facturacio.xml")//factura
let $nomclient := $f/client/raosocial/nom
let $totalfactura := $f/total
order by $totalfactura descending
return concat("Client ", $nomclient, ". Total factura: ", $totalfactura)
```
